Effective and efficient oil and gas production is the lifeblood of this industry. Following the exploration phase comes the production phase. This can only happen once a well has been completed. This involves drilling the well and fitting casing pipes and tubing to transport the hydrocarbons within the well. To ensure the flow of hydrocarbons is regulated; valves are used to control the rate and flow of the reserve.

1 Introduction. Oil has been used for lighting purposes for many thousands of years. In areas where oil is found in shallow reservoirs, seeps of crude oil or gas may naturally develop, and some oil could simply be collected from seepage or tar ponds. Historically, we know the tales of eternal fires where oil and gas seeps ignited and burned. One example is the site where the famous oracle of Delphi was built around 1,000 B.C. Written sources from 500 B.C. describe how the Chinese used ...
