Big science is a term used by scientists and historians of science to describe a

series of changes in science which occurred in industrial nations during and after World War II, as scientific progress increasingly came to rely on large-scale projects usually funded by national governments or groups of governments. Individual or small group efforts, or Small Science, are still relevant today as theoretical results by individual authors may have a significant impact, but very often the empirical v

Big ideas of Science Education were published by Wynne Harlen and others in 2010. These ideas distil down scientific knowledge into ten guiding principles that we can use to explain a diversity of scientific phenomena. The big ideas are lenses by which we can make sense of the world – an important goal for science education.

Little Science, Big Science is a book of collected lectures given by Derek J. De

Solla Price, first published in 1963. The book presents the 1962 Brookhaven National Laboratory Pegram Lectures, a series of lectures dedicated to discussing science and its place in society. Price's goal in the lectures is to outline what it may look like for science to be analysed scientifically, by applying methods of measuring, hypothesizing, and deriving to science itself. With this goal in mind, he sets out to

Whilst big ideas help to frame the ultimate goals of science education, it's important to recognise that big ideas cannot be taught directly. This sounds a bit odd, but just as we can't teach students to be 'problem solvers', we can

teach them a body of knowledge that enables them to solve problems in a specific domain.
