The theory of game-based learning (GBL) involves a new way of training the employees of companies. We are talking about the use of games for learning. The offer for gamified content is increasing and getting more and more varied, with video games designed for nearly all target audiences and sectors. At corporate level, this methodology is experiencing an undeniable boom.

The theory of game-based learning - Gamelearn

Written by leading experts in the field, Game Theory and Learning for Wireless Networks Covers how theory can be used to solve prevalent problems in wireless networks such as power control, resource allocation or medium access control. With the emphasis now on promoting ‘green’ solutions in the wireless field where power consumption is minimized, there is an added focus on developing network solutions that maximizes the use of the spectrum available.

t. e. Game theory is the study of mathematical models of strategic interaction among rational decision-makers. It has applications in all fields of social science, as well as in logic, systems science and computer science. Originally, it addressed zero-sum games, in which each participant's gains or losses are exactly balanced by those of the other participants.
