It emphasizes decisions made before those of chemical process design, a more familiar topic. Chemical product design is a response to major changes in the chemical industry which have occurred in recent decades. These changes, described in Sections 1.2 and 1.3, involve a split in the industry between manufacturers of commodity chemicals and developers of specialty chemicals and other chemical products. The former are best served by process design, and the latter by product design.

Chemical Product Design

The new product-oriented chemical industry has three categories of products with different key characteristics. The first and most obvious category is commodities, the same products that used to dominate the chemical enterprise. The key for producing these products is their cost. The second and third categories of products may be less familiar.
