Crystallization and polymorphism of fats and fatty acids

The molecular species of the fats and lipids are paraffins, fatty acids, glycerols (mono, di and trio), phospholipids, etc., which are categorized as long-chain compounds (Small, 1986). The crystallization behaviour of fats and lipids has two major industrial implications: (a) processing of the end products made of fat crystals, such as chocolate, margarine and shortening, whipping cream, etc., and (b) separation of specific fats and lipids materials from natural resources.

Crystallization, Polymorphism and Stability of ...

The crystallization of fats is complicated not just by polymorphism, but also because it usually occurs from a multi-component melt rather than from a solvent which is more common in other industrial crystallizations. This renders the conventional treatment of crystallization as a result of supersaturation somewhat meaningless.

Abstract. This work was aimed to study the solvent fraction of coconut oil (CNO). The fatty acid and triacylglycerol compositions, solid fat content (SFC) and the crystallization properties of CNO and its solid and liquid fractions obtained from fractionation at different conditions were investigated using various techniques. CNO was dissolved in acetone (1:1 w/v) and left to crystallize isothermally at 10°C for 0.5, 1 and 2 h and at 12°C for 2, 3 and 6 h.
