Problems in Plane Analytic Geometry: Problems with Solutions.
 Find the distance between A (5, -3) and B (2, 1). Find the slope of
 a line, which passes through point A (5, -3) and meets y axis at 7.
 Answer: $y = \frac{2}{3}x + \frac{7}{3}$ $\displaystyle y = \frac{2}{3}x + \frac{7}{3}$
 $y = \frac{3}{2}x + \frac{3}{7}$ is the equation of the line. (2,0).

Problems in Plane Analytic Geometry: Problems with Solutions

This is also called coordinate geometry or the cartesian
 geometry. Analytic geometry is a contradiction to the synthetic
 geometry, where there is no use of coordinates or formulas. It is
 considered axiom or assumptions, to solve the problems. But in
 analytic geometry, it defines the geometrical objects using the
 local coordinates. It also uses algebra to define this geometry.

Analytic Geometry (Coordinate Geometry) - Formulas & Examples

In analytic geometry, also known as coordinate geometry, we
 think about geometric objects on the coordinate plane. For
 example, we can see that opposite sides of a parallelogram are
 parallel by writing a linear equation for each side and seeing that
 the slopes are the same.
