In line graphs, the y-axis runs vertically (up and down). Typically, the y-axis has numbers for the amount of stuff being measured. The y-axis usually starts counting at 0 and can be divided into as many equal parts as you want to. In this line graph, the y-axis is measuring the amount of money spent on individual students for public education. The Data

A line graph, also called a line chart, is a graph with points connected by lines to show how something has changed over time. When the changes are small, it's often better to use a line graph rather than a bar graph because they can show subtle changes more clearly.

Each of these line

graphs shows a change in data over time. A line graph is useful for displaying data or information that changes continuously over time. Another name for a line graph is a line chart. The graph below will be used to help us define the parts of a line graph.

Line Graphs - Math Goodies

Using a ruler, lightly draw a straight line in pencil directly up from the mark until it reaches the graph. Now turn the ruler a quarter-turn and draw (still lightly in pencil) across from where your vertical line meets the graph, until you reach the vertical axis. Where this line meets the vertical axis is your answer.

The Basics of Line Graphs - dummies

A line graph uses dots connected by lines to show how amounts change over time. For example, a line graph could show the highest temperature for each month during one year. One side of the graph would show a range of temperatures. The bottom of the graph would show the months.
