If the solution set is a range of numbers, as the one we looked at above is, we will use something called set builder notation. Here is the solution set for the inequality we looked at above. $\{z|z \geq -5\}$ This is read as : “The set of all $\{z\}$ such that $\{z\}$ is greater than or equal to -5”. Most of the inequalities that we will be looking at will have simple enough solution sets that we often just shorthand this as,

The set containing all the solutions of an equation is called the solution set for that equation. If an equation has no solutions, we write $\emptyset$ for the solution set. $\emptyset$ means the null set (or empty set). Sometimes, you may be given a replacement set, and asked to test whether the equation is true for all values in the replacement set. Example 1:
