Triangulation Development Method Engineering Drawing

Triangulation is a geometric development process used to create patterns of conical and transition shapes. Triangulation allows you to determine the true length of a line or surface on a drawing by creating a right angled triangle. Look at the diagram below. A right angled triangle is formed by taking the distance between two points (example C7) on the top view, placed against the vertical height (example - the centre line of the front view) of the shape.
