$K = \frac{1}{2} \rho v^2$: The 19. Figure 2.1: Particle motion of P and S waves solution to this equation is: $p(x;t) = s(t - x/c)$ (2.4) where $s(t)$ is some function. Note the dependency on space and time via $(t - x/c)$, which denotes that it is a travelling wave. The sign in the argument is depending on which direction the wave travelling in.

This law is utilized in the seismic reflection method. It states that "the angle of incidence is equal to the angle of reflection". In case of $i=0$, the ratio of the reflected energy of P-wave, E_r , to the incident energy, E_i , is given by: $E_r / E_i | i=0$ The square root of the above relationship is called Reflection Coefficient, R .

The general principle
of seismic reflection is
to send elastic waves
(using an energy

source such as dynamite explosion or Vibroseis) into the Earth, where each layer within the Earth reflects a portion of the wave's energy back and allows the rest to refract through. These reflected energy waves are recorded over a predetermined time period (called the record length) by receivers that detect the motion of the ground in which they are placed.
