A Short Course on Topological Insulators

Band Structure and Edge States in One and Two Dimensions *Springer*

This course-based primer provides newcomers to the field with a concise introduction to some of the core topics in the emerging field of topological insulators. The aim is to provide a basic understanding of edge states, bulk topological invariants, and of the bulk--boundary correspondence with as simple mathematical tools as possible. The present approach uses noninteracting lattice models of topological insulators, building gradually on these to arrive from the simplest one-dimensional case (the Su-Schrieffer-Heeger model for polyacetylene) to two-dimensional time-reversal invariant topological insulators (the Bernevig-Hughes-Zhang model for HgTe). In each case the discussion of simple toy models is followed by the formulation of the general arguments regarding topological insulators. The only prerequisite for the reader is a working knowledge in quantum mechanics, the relevant solid state physics background is provided as part of this

self-contained text, which is complemented by end-of-chapter problems.

Man and Beast

Photographs from Mexico and India *University of Texas Press*

Mary Ellen Mark is an internationally acclaimed photographer who has long been fascinated by the complex relationships between people and animals—as she puts it, “the anthropomorphic quality of animals, and the animalistic quality of man.” This fascination has lured her again and again to Mexico and India, two countries that, despite their many differences, share “a primal force . . . that makes the relationship between man and beast even more obvious. There is a more fundamental and intimate working relationship between the people and animals, and this relationship is something I am drawn too and try to convey in many of my photographs.” *Man and Beast* presents an extended photo essay comprising images from Mexico and India that span some forty years. Many of the Indian images were taken while Mark was working on her classic book *Indian Circus* (1983), but most of the photographs have never been previously published. Infused with an unsentimental poignancy and a fully intentional anthropomorphism, Mark’s photographs of animals, circus performers, children, and others are sometimes ironic, occasionally unsettling, but always remarkably engaging. Accompanying the images are a photographer’s statement and a conversation between Mark and Melissa Harris, editor-in-chief, Aperture Foundation, covering Mark’s lifelong passion for animals, her experiences photographing them in circuses with their trainers, and her efforts to portray the humanity of animals

and the lurking beast within humans.

How Photography Became Contemporary Art

Inside an Artistic Revolution from Pop to the Digital Age

Yale University Press

A leading critic's inside story of "the photo boom" during the crucial decades of the 1970s and 80s. When Andy Grundberg landed in New York in the early 1970s as a budding writer, photography was at the margins of the contemporary art world. By 1991, when he left his post as critic for the New York Times, photography was at the vital center of artistic debate. Grundberg writes eloquently and authoritatively about photography's "boom years," chronicling the medium's increasing role within the most important art movements of the time, from Earth Art and Conceptual Art to performance and video. He also traces photography's embrace by museums and galleries, as well as its politicization in the culture wars of the 80s and 90s. Grundberg reflects on the landmark exhibitions that defined the moment and his encounters with the work of leading photographers—many of whom he knew personally—including Gordon Matta-Clark, Cindy Sherman, and Robert Mapplethorpe. He navigates crucial themes such as photography's relationship to theory as well as feminism and artists of color. Part memoir and part history, this perspective by one of the period's leading critics ultimately tells a larger story about the crucial decades of the 70s and 80s through the medium of photography.

Joe Gould's Secret *Open Road Media*

The story of a notorious New York eccentric and the journalist who chronicled his life: "A little masterpiece of observation and storytelling" (Ian McEwan). Joseph Mitchell was a cornerstone of the New Yorker staff for decades, but his prolific career was shattered by an extraordinary case of writer's block. For the final thirty-two years of his life, Mitchell published nothing. And the key to his silence may lie in his last major work: the biography of a supposed Harvard grad turned Greenwich Village tramp named Joe Gould. Gould was, in Mitchell's words, "an odd and penniless and unemployable little man who came to this city in 1916 and ducked and dodged and held on as hard as he could for over thirty-five years." As Mitchell learns more about Gould's epic Oral History—a reputedly nine-million-word collection of philosophizing, wanderings, and hearsay—he eventually uncovers a secret that adds even more intrigue to the already unusual story of the local legend. Originally written as two separate pieces ("Professor Sea Gull" in 1942 and then "Joe Gould's Secret" twenty-two years later), this magnum opus captures Mitchell at his peak. As the reader comes to understand Gould's secret, Mitchell's words become all the more haunting. This ebook features an illustrated biography of Joseph Mitchell including rare images from the author's estate.

Florida Institute of Technology *Arcadia Publishing*

In the 1950s, East Central Florida underwent a vast transformation with the creation of the American space program. The sleepy fishing communities stretching from Titusville to Melbourne became home to an army of engineers, rocket scientists, and technicians who would soon take Florida and the nation into the missile age. With no opportunities for advanced study nearby, a handful of determined men and women launched Brevard Engineering College in 1958. In 1966, Florida's secretary of state approved the college's petition to change its name to Florida Institute of Technology. In its short history, Florida Tech has overcome formidable hurdles and succeeded in winning a place in the top ranks of scientific and technological universities. A college on the rise, Florida Tech has not only a bright future,

but a rich and colorful history that has been captured in striking photographs. The exciting story of "Countdown College"-from the lift-off of Bumper 8 in 1950, which launched the space program in Florida, to the most recent high-tech additions to campus facilities-is the subject of this captivating new pictorial history.
