DNA replication is a process during which DNA double helix opens like a zipper, new nucleotides are added along both strands of DNA by enzyme DNA polmerase and at last two molecules of DNA are...

What is DNA replication? - Answers

DNA Replication Read the passage below, which covers topics from your textbook. Answer the questions that follow. The process of DNA replication occurs in a series of steps. In step 1, enzymes called helicases separate the DNA strands. Helicases move along the DNA molecule, breaking hydrogen bonds between the complementary nitrogenous bases. This action allows the two DNA strands of the double ...

DNA Replication active reading .doc - DNA Replication Read ...

DNA replication is the production of identical DNA helices from a single double-stranded DNA molecule. Each molecule consists of a strand from the original molecule and a newly formed strand. Prior to replication, the DNA uncoils and strands separate. A replication fork is formed which serves as a template for replication.

Dna Replication And Rna Transcription Worksheet Answers ...

The direct method of terminating DNA replication in bacteria with a circular genome is best described as. A. sequence dependent, in other words there is a "terminating" sequence analogous to the initiating sequence OriC. B. sequence independent, in other words, DNA replication is terminated when the replication forks meet. C. a replication fork ...

Solved: DNA Replication Of Bacterial Chromosome Occurs In ...

DNA replication is the process wherein the DNA makes a copy of itself. This usually occurs during cell division. The double helix structure will be unzipped first then the hydrogen bonds will be broken down. The separated structure will then create the replication fork form. The two new strands will serve as the new, replicated DNA.

What is DNA replication? - ProProfs Discuss

In molecular biology, DNA replication is the biological process of producing two identical replicas of DNA from one original DNA molecule. DNA replication occurs in all living organisms acting as the most essential part for biological inheritance. The cell possesses the distinctive property of division, which makes replication of DNA essential. DNA is made up of a double helix of two complementary strands. During replication, these strands are separated. Each strand of the original DNA molecule
